

# **emist** odor control system for trash compactors

A foul trash compactor may give clients or customers the wrong impression of your business. That's not a risk you can afford to take. If you've been coping with trash compactor or loading dock odor by scheduling more frequent trips from your trash hauling company, you're wasting valuable business resources. Eliminate stinky garbage odor for good with the eMIST odor control system by envirostat.

The eMIST Compactor Odor Control System can be easily installed in minutes. To start, simply attach our unique spray nozzle assembly to any style compactor. Next, connect the 5, 35, or 55 gallon tank to the wall mounted eMIST box and spray nozzle assembly using quick-connect fittings and tubing provided. A quick dis-connect fitting is provided and installed for your hauler to dis-connect and re-connect the system as needed. Once set up, the eMIST sprays a 10-second spray of odor removing agent every 15 minutes providing odor control, 24/7. The eucalyptus scented solution eliminates the trash odor while acting to eliminate the bacteria that causes the odor. Because the system is automatic, it requires little employee maintenance and will continue to control odor around the clock. The tank of eliminODOR solution will last for approximately 30 days. At the end of that time period, simply refill your container with a 32-oz. bottle of product concentrate and water. The only requirements are 110v power and a water source to fill the tank as needed.

**eliminODOR**<sup>™</sup>
